

SPEED LIMITER

The speed limiter is a screw installed in the throttle control case. It limits maximum throttle and top speed to about 25 Km/h. (16 mph). This limiter is especially applicable to beginning riders. After the rider becomes proficient, the speed limiter can be removed by loosening the lock nut and removing the speed limiter screw.

WARNING

Failure to plug the hole after removing the speed limiter screw will allow dirt to enter, and may cause the throttle to stick open.

CAUTION:

To prevent rapid clutch wear, do not operate below 20 km/h (13 mph) in 4-th gear.
