

Shifting to low from neutral is performed by depressing the gear change pedal; successive shifting into second (top) is made by depressing the pedal in sequence. Shifting down in gear is accomplished by lifting up the gear change pedal in successive sequence. The shifting sequence pattern is shown below.

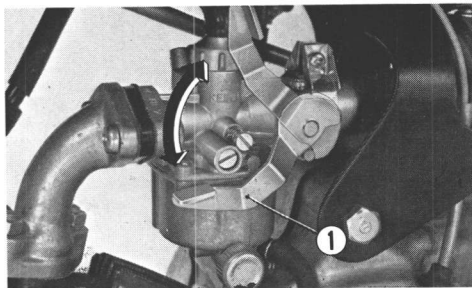

Gear shifting sequence

Choke Lever

The choke lever ① is located on the left side of the carburetor.

Raising the lever will close the carburetor choke. Placing the lever in the lowered position will open the choke valve fully. Refer to page 13 for operating instruction of the choke valve.
