

## • STOPPING THE MOTORCYCLE

- (1) For maximum deceleration, close the throttle and apply both front and rear brakes equally.

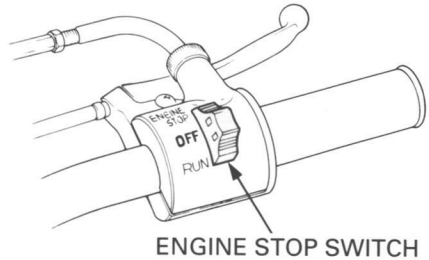

In braking, apply enough gradual pressure to bring the motorcycle to a full stop.

### **⚠ WARNING**

*Failure to use both brakes simultaneously may cause the motorcycle to go into a skid, resulting in injury or damage.*

- (2) Move the engine stop switch to OFF as the motorcycle comes to a stop.

## • PLACING THE MOTORCYCLE ON THE CENTER STAND

- Place the motorcycle on a level ground.
- Hold the handlebar straightahead with your left hand. Keeping a firm grip on the side grip with your right hand, pull the motorcycle up onto the center stand while stepping on the tab of the left leg.
