

Load Limits & Guidelines

Cargo and Trailer Information

The ATV was designed to carry you and a specific amount of cargo. The ATV can be used to tow a trailer and a specific amount of cargo with the installation of Honda Trailer Hitch.

The Hondaline Trailer Hitch Kit contains specific information regarding trailer towing with the ATV. Towing a trailer without reading this information is not recommended.

Cargo and/or the addition of a trailer will affect the acceleration, braking and handling of the ATV. Do not exceed the recommended limits listed below. Follow the guidelines (page 53).

The following load limits apply to standard equipment only. Modifying your ATV, using non-standard equipment, or riding on terrain that is not flat and smooth could further reduce these limits.
