

Replacement:

When a new drive chain is installed, a new wear label must be attached according to the directions provided with the replacement chain. Since new chain lengths vary slightly, proper label placement is necessary to provide an accurate wear and replacement indication. **CAUTION: Never install a new drive chain on badly worn sprockets, or use new sprockets with a badly worn drive chain.**

Lubrication and cleaning:

The drive chain on this motorcycle is equipped with small O-rings between the link plates. The O-rings can be damaged by steam cleaner, high pressure washers, and certain solvents. Clean the chain with kerosene. Wipe dry and lubricate only with SAE 80 or 90 gear oil. Commercial chain lubricants may contain solvents which could damage the rubber O-rings.
