

Adding Oil

- Warm up the engine at idling for a few minutes on flat surface.
- Open the oil filler cap a few minutes after stopping the engine.
- Hold the motorcycle upright. Add oil from the inlet and monitor the oil level from the oil level window.
- Do not allow any debris to enter from the inlet.
- Wipe off oil spills immediately.
- Attach the oil filter cap.

Advice

Never fill above the maximum level or allow the oil level to fall below the minimum level. Both may damage the engine.
