
Oil Quantity check

1. Park the motorcycle on flat and level surface. Start and warm-up the engine, particularly in cold climates. Warm up can be done with the side stand extended and the motorcycle leaning to one side.

2. After warming up the engine, let the engine run at idling rpm for about one minute while the motorcycle is held upright.

After engine warm-up, do not run the engine at idling rpm or let the motorcycle lean to one side.
