

Cable wire

<Checking rubber boots>

Rubber boots are fitted to protect the inner cables. Regularly check these areas to make sure that the cables are protected correctly. Take care when washing not to apply water or cleaning brushes directly to these areas. Use a damp clean cloth to clean around these areas if they are significantly dirty.

<Checking cables / wires>

Check the operating functions of the brake lever, clutch lever, and the throttle grip to make sure they are working correctly and smoothly. When released they should move back to their original positions with ease. Check with your HONDA dealer if you find any abnormalities in any of the cables or wires on this motorcycle.
