

## Rebound Damping

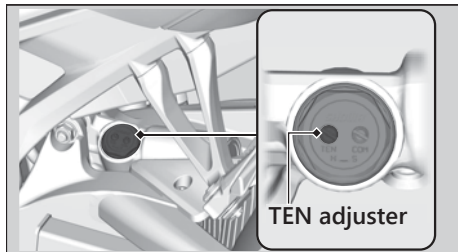

CBR1000RR/RA

You can adjust the rebound damping by the TEN adjuster to suit the load or the road surface.

The TEN adjuster has 4 turns.

Turn clockwise to increase rebound damping (hard), or turn counterclockwise to decrease rebound damping (soft).

The standard position is 2 1/2 turns from the full hard position.

### NOTICE

Do not turn the adjuster beyond its limits.

### NOTICE

The rear shock absorber damper unit contains high pressure nitrogen gas. Do not attempt to disassemble, service, or improperly dispose of the damper. See your dealer.
